

27 February 2017

**A leader in plastics and closed loop recycling
to attend PRS Europe 2017**

As one of Europe's largest plastic recyclers and a leader in closed loop recycling, RPC bpi recycled products is proud to be attending PRS Europe 2017, at the RAI Amsterdam, from 29 - 30 March 2017.

RPC bpi recycled products is perfectly placed to help dispose of a wide range of plastic waste from across the continent. Every year, through a network of environmentally certified sites over 75,000 tonnes of material is recycled from the industrial, commercial, agricultural, horticultural, automotive, retail, distribution and construction industries.

The company's extensive infrastructure and sustained investment in new technology and innovation enables recycled materials to be turned into second life quality products that include: refuse and recycling sacks, building films, outdoor furniture and landscaping products.

Closed Loop Recycling

RPC bpi recycled products embraces the circular economy and is the perfect partner for closed loop recycling schemes due to their in-depth expertise and resources. Such schemes offer retailers, manufacturers and many other organisations a high-profile way to demonstrate the strength of their commitment to the environment. Customers' plastic waste can be turned into second life products for their own use or use by their customers.

Green Credentials

The company's green credentials are impressive. For every tonne of polythene recycled (compared to using a tonne of virgin polythene) saves 1.8 tonnes of crude oil; reduces

energy usage by two thirds; uses 90% less water; cuts emissions of sulphur dioxide by 33% and nitrous oxide by 50% and prevents the release of 1.5 tonnes of CO₂ into the atmosphere.

If you are looking for a reliable European partner to recycle your polythene waste, RPC bpi recycled products can offer you competitive pricing, unrivalled technical support and prompt payment.

Our experienced team will be on hand to offer advice and assistance at **PRS Europe 2017, Stand B78.**
